

Side Slip Tester

SIDE SLIP TESTER

MODEL **ST-211H**

Side Slip Tester Supports Maximum 3.6t Axle Load

Support for a Wide Range of Vehicles from Light Cars to Small- and Medium-sized Trucks with Maximum 3.6t Axle Load!

Improved Rust Resistance and Durability

Allowable Axle Load
3.6t

Pass or fail for the side slip for straight driving can be determined accurately from the toe and camber angles

Easy Measurement

Measurement is quick! Just drive a vehicle straight at a slow speed and read the maximum indicated value of the meter while the tire passes over the footboard.

Easy Installation

Since the frame for the tester is a box-like shape, the installation is easy. It can be installed with the footboard inserted into it!

Indicator

You can select an analog or digital meter.

Analog Meter

- Standard analog specification
- Measurement results can be easily read with the large easy-to-read indicator

Work space can be used effectively

Digital Meter

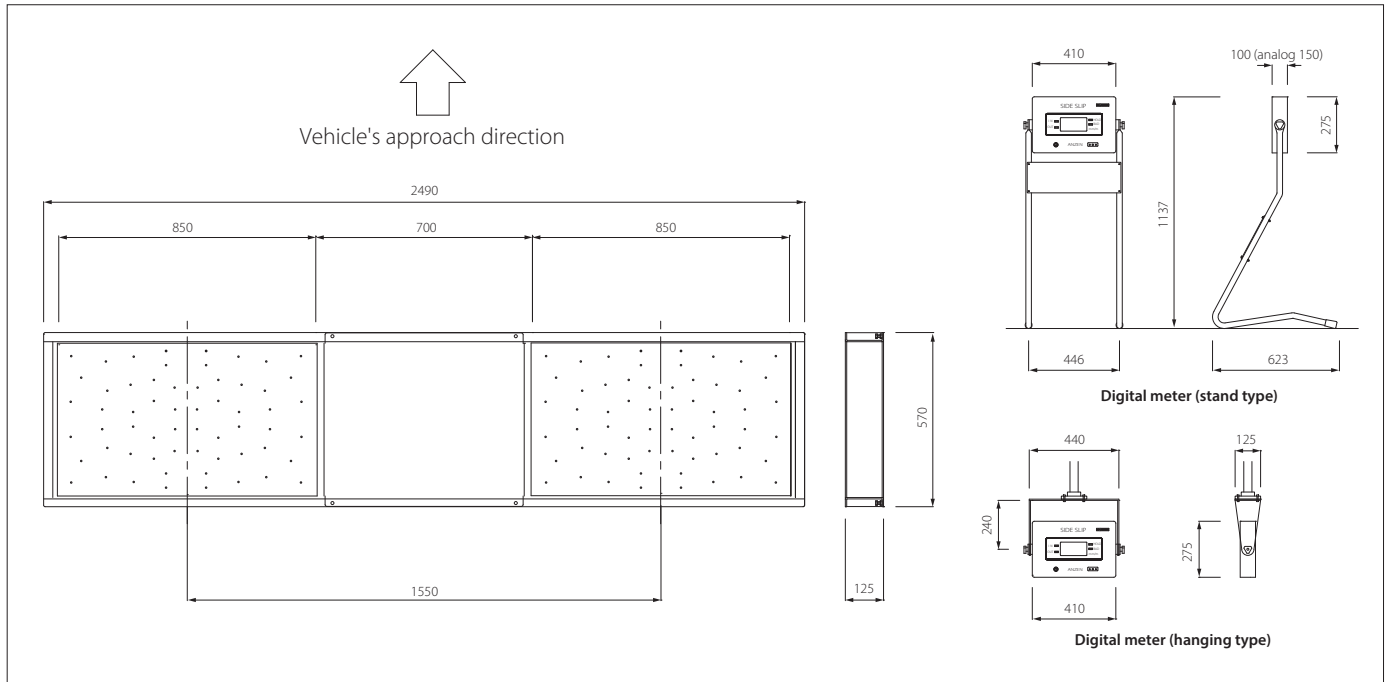

- Hold display is also available depending on the application
- LED digital display is used so measurement results can be read from any angle

Work space can be used effectively

Optional wireless and wired remote control are available.
